

Press Release

LIOS Technology supplies DTS Systems at various On- and Offshore Projects

- First DTS supplier with an approved WITSML data interface.

Cologne, 28. August 2007

LIOS Technology GmbH will be exhibiting product highlights at the Offshore Europe 2007, Aberdeen, 4th – 7th September – German Pavilion No. 1493G.

LIOS Technology supplies Optical Temperature System (OTS) for Distributed Temperature Monitoring in Oil and Gas Exploration

LIOS Technology's sophisticated distributed temperature sensing systems offer the unique ability to provide a reliable, non-intrusive means of continuous temperature logging of wells, enabling full coverage of complex and multilateral wells with a single optical fibre cable. It continuously monitors the temperature of an optic fibre at all points along its entire length.

LIOS Technology GmbH is the first DTS supplier with an approved WITSML data interface, which was successfully deployed at various on- and offshore projects in cooperation with Shell International Exploration and Production recently. The petrotechnical protocol standard WITSML ensures compatible data streams on TCP/IP level of distributed temperature profiles, backscattering profiles and event data. LIOS offers its DTS systems with integrated protocol converter, technologies to safely transfer data and enable its integration into customised database structures.

This integrated system setup makes LIOS' DTS units ideally suited for any off-shore or remote sensing demand: one single evaluation unit with a max. power consumption of 26W senses up to 8 fibres with each up to 10km length and directly creates all measurement data in WITSML format.

Mr. Daan van Laar

Hall ,blue zone', German Pavilion No. 1493 G.

Company Profile:

LIOS is a dynamic global acting company based in Cologne, Germany, – it is a member of the Danish NKT group, which operates throughout the world. LIOS is the global leader in supplying state-of-the art high-tech fibre optic sensors in various market segments as Fire detection in road and rail tunnels, Electric cable monitoring and Oil & Gas field.

Achievements:

LIOS Technology is actively deploying its sensor technology and has already equipped successfully more than 1500 permanent system installations worldwide.
